Renea Sturm is an Assistant Professor in the Department of Urology at UCLA. Her clinical practice focuses on the care of children with congenital anomalies and disorders of the kidneys, bladder and genitalia, including the application of minimally invasive approaches to surgical reconstruction. She is PI of an NIH- and NSF-funded research laboratory focusing on urethral tissue engineering and surgical device development, working closely with partners in materials science, chemical and bio-engineering. A graduate of Baylor College of Medicine, Dr. Sturm completed her urology residency at UC Davis and fellowship in pediatric urology at Northwestern / Lurie Children's Hospital.
